INTRODUCCÃO
INTRODUCTION

A grande acceitação que teve o folheto publicado pela Directoria Geral de Estatistica, com o titulo "Tabellas de conversão das principaes medidas agrarias usadas no Brazil em unidades do systema metrico decimal" e destinadas a facilitar os trabalhos de apuração do recenseamento agricola de 1920, mostra a conveniencia de uma nova edição desse trabalho, que sahe agora á luz, pela segunda vez, devidamente revisto e accrescido de algumas informações novas que completam os elementos constantes da 1ª edição.

Uma versão franceza das explicações necessarias ao manejo das tabellas facilita a consulta ás pessoas de outras nacionalidades que, pouco versadas no nosso idioma, se interessam, todavia, por assumptos brasileiros, o que concorrerá tambem para augmentar a utilidade da publicação e a sua procura, compensando desta fórma o esforço da Directoria Geral de Estatistica no sentido de attingir a finalidade que tem em vista.

Rio de Janeiro, 27 de Dezembro de 1930.

Balthes Carvalho

Le succès obtenu par la publication "Tables de conversion des principales mesures agraires usitées au Brésil, en unités du système métrique décimal", destinées à faciliter le dépouillement du recensement agricole de 1920, a démontré l'avantage d'une réédition de cet ouvrage, qui vient de paraître, dûment revue et augmentée de quelques renseignements qui compléteront la 1^{re} édition.

Une version française des explications nécessaires à l'emploi des tables, en facilitera la consultation aux étrangers qui, peu familiarisés avec l'idiome national, étudient néanmoins avec intérêt les sujets concernant le Brésil. Ce complément contribuera à accroître l'utilité de la publication et à en augmenter la recherche, mettant ainsi à profit les efforts développés par la Direction Générale de Statistique pour atteindre le but proposé.

Rio de Janeiro, le 27 décembre 1930.

Balthazar Carralho

ADVERTENCIA DA 1ª EDIÇÃO

No intuito de uniformizar as medidas agrarias consignadas nos boletins do censo agricola, convertendo-as em unidades do systema metrico decimal, organizou a 3ª Secção da Directoria Geral de Estatistica uma série de tabellas para uso interno nos trabalhos de apuração do recenseamento realizado em 1º de Setembro do anno proximo findo.

As medidas de superficie usadas nos diversos Estados variam muito de uma localidade para outra, baseando-se mais na pratica costumeira do que em qualquer criterio scientifico que permita a sua facil systematização. Essa divergencia, — inevitavel em vista da immensidade do nosso territorio e da autonomia com que se vão desenvolvendo as differentes zonas do paiz por falta de meios facéis de mutua communicação, — exige o emprego de promptuarios que estabeleçam a justa equivalencia das medidas com que se avaliam as superficies nos diversos Estados, desde que não é facil generalizar, entre as populações do interior, o uso do systema metrico decimal adoptado para os registros officiaes.

O trabalho da 3ª Secção da Directoria Geral de Estatistica resolve de maneira satisfactoria o problema, prevalecendo-se dos subsidios fornecidos pelas auctoridades censitarias incumbidas de executar o recenseamento de 1920.

Apezar de elaboradas em moldes desprezenciosos, sem intuito de publicidade, as tabellas organizadas pelo Chefe da 3ª Secção prestam reaes serviços, pelo que julguei acertado divulgar-as no folheto a que as presentes linhas servem de introdução, dando assim o merecido realce a esta nova prova da operosidade e intelligencia com que o 1º Official ANTONIO CAVALCANTI ALBUQUERQUE DE GUSMÃO vem desempenhando os seus arduos encargos na direcção dos inqueritos agricola e industrial, actualmente levados a effeito.

Rio, 31 de Março de 1921

Balthes Carvalho

AVERTISSEMENT DE LA 1^{re} EDITION

En vue d'uniformiser les mesures agraires consignées dans les bulletins du recensement agricole, en les convertissant en unités du système métrique décimal, la 3^{ème} Section a organisé une série de tables pour le dépouillement du recensement du 1^{er} septembre de l'année écoulée.

Les mesures de superficie usitées dans les divers Etats varient selon la localité, se basant plutôt sur la pratique habituelle, que dans un critérium scientifique quelconque, qui en permette une facile systématisation. Cette divergence inévitable, à cause de l'étendue considérable de notre territoire et de l'isolement dans lequel se développent les différentes régions du pays, en raison de l'insuffisance des moyens de communication, exige l'emploi de promptuaires qui établissent la juste équivalence des mesures servant à évaluer les superficies dans les divers Etats, puisqu'il n'est pas facile de généraliser, parmi les populations de l'intérieur, l'usage du système métrique décimal adopté par les registres officiels.

Se prévalant des subsides fournis par les autorités censitaires, chargées de l'exécution du recensement de 1920, la 3^{ème} Section a résolu le problème d'une manière satisfaisante.

Quoique présentées sous une forme simple, sans intention de publicité, ces tables rendent de réels services, ce qui m'a fait juger à propos de les divulguer dans la brochure dont les présentes lignes serviront d'introduction, tout en rehaussant le mérite et l'intelligente activité dont a fait preuve M. Antonio Cavalcanti Albuquerque de Gusmão, dans la direction des pénibles travaux du recensement agricole et industriel actuellement mis à effet.

Rio, le 31 mars 1921.

Balthazar Carvalho

TABELLAS DE CONVERSÃO DAS MEDIDAS AGRARIAS

As tabellas publicadas neste folheto tem por fim principal abreviar os serviços de apuração do recenseamento agricola na parte referente á conversão das medidas agrarias em unidades do systema metrico decimal.

No inquerito da lavoura feito pela Directoria Geral de Estatistica não se exigiu que as informações sobre a extensão dos immoveis ruraes se referissem a uma determinada medida, conforme se vê pelos quesitos 6, 7 e 8 do questionario, modelo 16. Ao contrario, deixou-se aos lavradores a faculdade de prestarem os seus depoimentos, a esse respeito, adoptando o padrão que mais lhes conviesse, no sentido de facilitar, quanto possivel, a collecta dos dados indispensaveis á organização do cadastro rural. Para esse alvitre contribuiu a diversidade dos meios empregados na medição das terras. De facto, não ha uniformidade sequer nos modelos oficialmente em vigor para o lançamento do imposto territorial nos Estados onde existe esta fonte de receita. Conformando-se, em geral, com as praxes locais, os regulamentos desse imposto estabelecem, como base de tributação, ora o *alqueire* (geometrico) (1), — equivalente, para os effeitos fiscaes, a 24.200 metros quadrados (100×50 braças), em São Paulo, no Paraná e em Minas Geraes; a 48.400 metros quadrados (100×100 braças), no Rio de Janeiro; — ora o hectare, no Rio Grande do Sul e no Pará; ora o kilometro quadrado, em Goyaz, etc.

No que diz respeito ás medições particulares, é muito frequente differirem as dimensões das unidades estabelecidas, não só no interior de um mesmo Estado, como até mesmo em cada municipio. É o que se observa, por exemplo, em relação a Minas Geraes, onde o alqueire geometrico oscilla entre o maximo de 193.600 metros quadrados, ou sejam 200 braças de frente por 200 braças de fundo, e o minimo de 18.150 metros quadrados, isto é, 50 × 75 braças, havendo, ao todo, 16 typos differentes.

No balanço geral ha pouco effectuado, a Directoria de Estatistica, — sem difficultar os meios de colher informações sobre as áreas, e até mesmo

(1) Chama-se geralmente *alqueire* a extensão de terreno em que se pôde plantar um alqueire de semente. Ora, sendo este variavel, conforme o logar, na mesma proporção varia a respectiva superficie.

TABLES DE CONVERSION DES MESURES AGRAIRES

Les tables publiées dans cette brochure ont pour but de faciliter le dépouillement du recensement agricole en ce qui concerne la conversion des mesures agraires en unités du système métrique décimal.

Comme on le voit par les questions 6, 7 et 8 du questionnaire, modèle 16 (questionnaire agricole), la Direction Générale de Statistique n'a pas exigé dans le recensement agricole, que les renseignements sur l'étendue des immeubles ruraux se rapportassent à une mesure déterminée. Au contraire, on a laissé aux travailleurs la faculté de présenter leurs rapports à ce sujet en adoptant le modèle qui leur fût le plus convenable, dans le but de faciliter autant que possible la levée des données indispensables à l'organisation du cadastre rural. A cette fin a beaucoup contribué la diversité des moyens employés pour le mesurage des terres. De fait, il n'y a pas même d'uniformité dans les modèles officiellement en vigueur pour l'imposition des taxes territoriales dans les Etats où il existe cette source de recette. Se soumettant, en général, aux habitudes locales, les règlements de cet impôt établissent comme base de tributation, tantôt l'"alqueire" (géométrique) (1) — équivalent, pour les effets de contrôle, à 24.200 mètres carrés (100 × 50 brasses) à São Paulo, au Paraná et à Minas Geraes; à 48.400 mètres carrés (100 × 100 brasses) à Rio de Janeiro; — tantôt l'hectare à Rio Grande do Sul et Pará; — tantôt le kilomètre carré à Goyaz, etc.

En ce qui se rapporte aux évaluations privées, il arrive fréquemment que les dimensions des unités établies diffèrent non seulement à l'intérieur d'un même Etat, mais aussi dans chaque municépe. C'est ce que l'on observe, par exemple, à l'égard de Minas Geraes où l'"alqueire" (géométrique) oscille entre le maximum de 193.600 mètres carrés (200 × 200 brasses) et le minimum de 18.150 mètres carrés, c'est à dire, 50 × 75 brasses, présentant un ensemble de 16 types différents d'"alqueires".

Dans l'enquête générale qui vient d'être effectuée, la Direction Générale de Statistique, sans difficulter les moyens de cueillir les renseignements sur les aires, démontrant même pratiquement, en l'un de

(1) On appelle généralement "alqueire" ("alqueire" géométrique) l'étendue de terrain où l'on peut planter un "alqueire" (boisseau) de semences. Or, cette mesure de capacité étant variable selon la localité, la mesure de superficie qui s'y rapporte variera de même, en proportion.

mostrando praticamente, em um dos seus boletins de propaganda, como deviam essas informações ser colligidas, — recommendou, expressamente, nas suas instrucções, constantes do art. 90, “ter bem em vista (o agente recenseador) a aprcciação da área ou extensão territorial das propriedades agricolas e pastoris, não só pela circumstancia de serem, em geral, deficientes os cadastros ruraes no Brazil, como tambem pelo facto de não haver um padrão uniforme de medida agraria para medição dos terrenos”. Cumpria ao agente recenseador “obter dados fidedignos a esse respeito”, devendo indicar, na propria caderneta de serviço, “o nome da medida usada na localidade e as suas dimensões”.

A vista de taes providencias, é de presumir que, ao terminarem os trabalhos censitarios, possa a Directoria de Estatistica organizar uma lista completa dos varios padrões em vigor em todo o paiz. Cumpria, entretanto, desde logo, reunir os elementos que facilitassem os serviços de apuração, na parte relativa á superficie dos immoveis arrolados, porquanto, como ficou dito, não fôra previamente fixado um padrão para a avaliação das áreas territoriaes.

Esse o objectivo visado com a presente publicação, que comprehende 19 tabellas differentes, inclusive as 6 constantes do *annexo*, das quaes 9 se referem a *alqueires*, de varias dimensões; 3 a *tarefas*, tambem deseguaes na extensão; 6 ás medidas: *quadra*, *cincoenta*, *braça quadrada*, *morgos*, *quadra de sesmaria* ou *quadra de campo*, *braça de sesmaria*; e, finalmente, 1 á conversão em hectares das extensões territoriaes segundo o numero de braças de frente e de fundo (1).

Não se deve confundir a *quadra* de que trata a tabella V, equivalente a um quadrado de 60 braças de lado (1,74 hectares), com a *quadra de sesmaria*, ou *quadra de campo*, (tabella XXV), como vulgarmente se chama no Rio Grande do Sul, a qual tem por dimensões 60 braças de frente e 3.000 braças de fundo (87,12 hectares), representando a quinquagesima parte da *legua de sesmaria* ou *legua quadrada*, cuja superficie total attinge a 9 milhões de braças quadradas, isto é, 4.356 hectares. No Maranhão e em certas localidades do Pará, dá-se tambem o nome de *quadra* á área abrangida por um quadrado de 100×100 braças (tabella XV), sendo, portanto, igual ao *alqueire* (geometrico) das mesmas dimensões.

A medida rural denominada *cincoenta* (50×50 braças), constante da tabella IV, e geralmente em uso na Parahyba, tem a mesma extensão que a *quarta de planta*, ou simplesmente *quarta*, em vigor no Rio Grande do Sul, equivalendo cada uma das duas medidas a 4 vezes a *tarefa* de 25×25 braças, muito conhecida nos Estados do Norte, taes como, entre outros, Alagôas, Bahia, Ceará, Pará, Parahyba, Piauihy e Sergipe. A *quarta* do Paraná (6.050 metros quadrados) é, porém, a metade da que se usa no Rio Grande do Sul (1,21 hectares), segundo as informações recebidas.

(1) A publicação óra feita comprehende 25 tabellas, ou sejam mais 7 além das que foram divulgadas, em 1921, na primeira edição.

ses bulletins de propagande, le mode à procéder pour les obtenir, a expressément recommandé à l'agent recenseur (art. 90 des instructions), "de bien avoir en vue l'appréciation de l'étendue territoriale des propriétés agricoles et d'élevage, non seulement à cause de l'imperfection du cadastre rural au Brésil, mais aussi par le manque d'un modèle uniforme de mesure agraire pour l'évaluation des terres". L'agent recenseur devrait "recueillir à ce sujet les renseignements les plus sûrs, ayant soin de noter dans son propre registre de service le nom et les dimensions de la mesure usitée dans la localité."

Il est à supposer qu'avec ces précautions, la Direction Générale de Statistique puisse à la fin des travaux censitaires organiser une liste complète des différents modèles en usage dans tout le pays. Il faudra donc, sans délai, rassembler les éléments facilitant les travaux du dépouillement en ce qui se rapporte à la superficie des immeubles recensés, puisque, comme il a été dit, aucun modèle de mesure agraire n'a été préalablement établi, pour l'évaluation des aires des superficies territoriales.

Voici l'objet en vue par cette publication, qui renferme 19 tables différentes, y compris 6 contenues dans l'annexe, et dont 9 se rapportent à "*alqueires*" de différentes dimensions: 3 a "*tarefas*" aussi de différentes grandeurs; 6 aux mesures: "*quadra*", "*cincoenta*", brasse carrée, "*morgos*", carré de "*sesmaria*" ou carré de champ, brasse de "*sesmaria*" et, finalement, 1 à la conversion, en hectares, des étendues territoriales d'après le nombre de brasses de front et de fond (1).

Il ne faut pas confondre la "*quadra*" dont il s'agit dans la table V, équivalente à un carré de 60 brasses de côté (1,74 hectares), avec le carré de "*sesmaria*" ou carré de champ (table XXV), comme on l'appelle communément à Rio Grande do Sul, et qui a pour dimensions 60 brasses de front et 3.000 de fond (87,12 hect.), 50^{ème} partie de la lieue de "*sesmaria*" ou lieue carrée, dont la superficie totale s'élève à 9 millions de brasses carrées, c'est à dire, 4.356 hectares. A Maranhão et dans quelques localités du Pará on désigne aussi par "*quadra*" l'aire d'un carré de 100 × 100 brasses (table XV), égal à l'"*alqueire*" (géométrique) des mêmes dimensions.

La mesure rurale dénommée "*cincoenta*" (50 × 50 brasses), continue dans la table IV et généralement employée à la Parahyba, a la même étendue que la "*quarta de planta*" ou simplement "*quarta*" (quart), d'usage à Rio Grande do Sul. Chacune de ces mesures est équivalente à 4 fois la "*tarefa*" de 25 × 25 brasses, dont l'usage est très répandu dans les Etats du Nord, tels que Alagôas, Bahia, Ceará, Pará, Parahyba, Piauhy et Sergipe. La "*quarta*" du Paraná (6.050 mètres carrés) est, d'après les renseignements reçus, la moitié de celle qui est employée à Rio Grande do Sul (1,21 hectares).

(1) Cette publication contient 26 tables, ou 7 en plus de celles qui ont été divulguées dans la 1^{ère} édition, en 1921.

A *braça quadrada*, com 2^m,2 de face, é a medida a que se refere a tabella XXII. Bcm diversa desse padrão é a *braça de sesmaria* (tabella XXIV), que occupa uma área correspondente a uma braça de frente por uma legua de fundo (3.000 braças) e equivale a uma superficie de 14.520 metros quadrados, ou sejam, approximadamente, 1 hectare e 45 ares.

O *morgos*, finalmente (tabella XXIII), que é applicado em medições ruraes de Santa Catharina, representa a quarta parte do hectare, com 50 metros de cada lado (1).

Cumpré notar a differença que ha entre as expressões *braças quadradas*, *meia legua quadrada*, *um quarto de legua quadrada*, etc., e as locuções *braças em quadro*, *meia legua em quadro*, *um quarto de legua em quadro*, etc. As primeiras designam quasi sempre uma superficie, que pôde ser representada ou não por um quadrado perfeito; as segundas exprimem, geralmente, uma extensão linear. Assim, por exemplo, 16 *braças quadradas* equivalcm a superficie de um quadrado que mede 4 braças de lado, ou, tambem, a uma área retangular com 2 × 8 braças, ao passo que 16 *braças em quadro* designam um quadrado que tem 16 braças de face. *Meia legua quadrada* corresponde á metade de 9 milhões de braças quadradas, ou sejam 2.178 hectares, emquanto que *meia legua em quadro* representa um quadrado com meia legua de lado, ou sejam $\frac{9.000.000}{4}$ braças quadradas = 2.250.000 braças quadradas, ou 1.089 hectares, isto é, a quarta parte da legua quadrada. *Um quarto de legua quadrada* corresponde á quarta parte da mesma extensão territorial, isto é, 2.250.000 braças quadradas, ou 1.089 hectares, ao passo que *um quarto de legua em quadro* representa um quadrado tendo um quarto de legua de lado, ou sejam $\frac{9.000.000}{16}$ braças quadradas = 562.500 braças quadradas, ou 272,25 hectares, isto é, a decima sexta parte da legua de sesmaria (ou legua quadrada). etc. (2).

Para as grandes extensões territoriaes são empregadas: a *legua de sesmaria* (ou legua quadrada), que, como ficou dito, mede 9 milhões de braças quadradas, comprehendendo 1.800 alqueires de 100 × 50 braças, isto é, cerca de 4.356 hectares; a *sesmaria de campo*, ou simplesmente *s smaria*, que abrange 3 leguas quadradas, ou sejam, no seu conjuncto, 27 milhões de braças quadradas, attingindo a elevada cifra de 13.068 hectares; o *kilometro quadrado* (100 hectares), etc. Em se tratando, porém, de menores superficies, são adoptados tambem — o *lote*, em Santa Catharina, com 25 hectares; a *colonia*, no Espirito Santo, com 5 alqueires de 100 × 100 braças (24,20 hectares), etc.

(1) Afim de facilitar a consulta, foi modificada nesta transcripção a numeração das tabellas agrarias, de modo a ficar de accordo com a ordem numerica ora adoptada no texto.

(2) JULIO BRANDÃO SOBRINHO — *Annuario Brasileiro de Agricultura, Industria e Commercio* 2º anno, 1911-1912 pag. 196.

La *brasse carrée* (2^m,2 de côté) est la mesure à laquelle se rapporte la table XXII. Bien différente de ce modèle est la *brasse de "sesmaria"* (table XXIV), qui occupe une aire correspondante à une brasse de front pour une lieue de fond (3.000 brasses) et équivaut à une superficie de 14.520 mètres carrés ou, à peu près, 1 hectare, 45 ares.

Le "*morgos*" (table XXIII), employé dans les évaluations rurales à Santa Catharina (50 mètres de côté), équivaut au quart de l'hectare. (1)

Il faut remarquer la différence qui existe entre les expressions *brasse carrée*, *une demi-lieue carrée*, *un quart de lieue carrée*, etc., et les locutions *brasses en carré*, *demi-lieue en carré*, *un quart de lieue en carré*, etc. Les premières désignent presque toujours une superficie que l'on peut représenter par un carré parfait; les dernières désignent, en général, une étendue linéaire. Ainsi, par exemple, 16 *brasses carrées* équivalent à la superficie d'un carré de 4 brasses de côté, ou encore à une surface rectangulaire de 2 × 8 brasses, tandis que 16 *brasses en carré* désignent un carré de 16 brasses de côté. Une *demi-lieue carrée* correspond à la moitié de 9 millions de brasses carrées, c'est-à-dire, 2.178 hectares, tandis qu'une *demi-lieue en carré* représente un carré d'une demi-lieue de côté, ou $\frac{9.000.000}{4}$ de brasses carrées = 2.250.000 brasses carrées ou 1.089 hectares, c'est à dire, le quart de la lieue carrée. Un *quart de lieue carrée* correspond au quart de la même étendue territoriale, c'est à dire, 2.250.000 brasses carrées, ou 1.089 hectares, tandis qu'un *quart de lieue en carré* représente un carré à un quart de lieue de côté ou $\frac{9.000.000}{16}$ brasses carrées = 562.500 brasses carrées, ou 272,25 hectares, ou soit la seizième partie de la lieue de "sesmaria" (ou lieue carrée) (2).

Pour les grandes étendues territoriales on emploie: la *lieue de "sesmaria"*, (ou lieue carrée) qui, comme il a été dit, mesure 9 millions de brasses carrées, comprenant 1.800 "alqueires" de 100 × 50 brasses, environ 4.356 hectares; la "*sesmaria*" de *champ*, ou simplement "*sesmaria*", comprenant 3 lieues carrées ou, en tout, 27 millions de brasses carrées, soient 13.068 hectares; le *kilomètre carré* (100 hectares), etc. Quand il s'agit de superficies de moindre étendue on emploie aussi le *lot* à Santa Catharina (25 hectares); la *colonie* à Espirito Santo, de 5 "alqueires" de 100 × 100 brasses (24,20 hectares), etc.

(1) Dans le but de faciliter la consultation, on a modifié dans cette transcription l'ordre des tables agraires, de manière à les mettre d'accord avec l'ordre numérique adopté dans le texte.

(2) JULIO BRANDÃO SOBRINHO — *Anuário Brasileiro de Agricultura, Industria e Comércio* 2^{ème} année, pag. 196.

Em ligeira investigação, tal foi o resultado apurado relativamente aos diversos typos de medidas agrarias mais frequentemente em uso no territorio brasileiro.

Descripção das Tabellas e modo de usal-as

DESCRIPÇÃO — A tabella relativa a cada especie de medida registra, em *hectares*, o equivalente dos numeros inteiros desde 1 até 1.000. A partir, porém, desse limite superior, a correspondencia dos algarismos decimaes é obtida em relação aos multiplos de 1.000, que passam a figurar na columna dos *Milhares*, collocada á esquerda de cada pagina para maior commodidade das operações a effectuar.

Em dez secções distinctas se divide a parte da tabella onde figuram as conversões dos numeros inteiros não excedentes de 1.000, registrando a primeira divisão os equivalentes decimaes das 100 primeiras unidades (1-100); a segunda as reduções referentes aos numeros comprehendidos entre 101 e 200; e assim por diante, até á decima divisão, onde são attingidos os resultados maximos (901-1 000).

MODO DE USAR AS TABELLAS — Na conversão decimal podem occorrer tres casos distinctos a saber:

1º caso — *Numero inteiro não excedente* de 1.000 — O numero inteiro não excedente de 1.000 está incluído integralmente em uma das 10 divisões da tabella, ahi se encontrando tambem o resultado da respectiva conversão. Si quizermos, por exemplo, saber a quanto corresponde uma área de 128 *alqueires* (geometricos) de 80 braças de frente por 80 braças de fundo, achar-se-á a referida extensão registrada na columna 101-200 da tabella IX (pag. 41) e á sua direita, na mesma linha horizontal, o equivalente — 396,49 *hectares*.

2º caso — *Numero inteiro excedente* de 1.000 — Se o numero cuja redução se tenciona fazer ultrapassar de 1.000 unidades, procura-se em uma das 10 divisões o equivalente decimal quanto aos tres ultimos algarismos, achando-se o equivalente relativo aos *milhares* registrado na respectiva divisão. Mediante uma simples somma dos resultados parciaes, obtem-se a cifra total que exprime a conversão do numero de que se trata. Assim, por exemplo, para reduzir 2.428 *alqueires*, de 24.200 metros quadrados, a *hectares*, procura-se na tabella XIII, columna 401-500 (pag. 63), o numero correspondente a 428 *alqueires*, e, ao lado, na divisão dos *milhares*, a cifra decimal referente aos 2.000 *alqueires* restantes. O resultado total da conversão em *hectares* será, portanto, expresso da seguinte maneira: $1.035.76 + 4.840.00 = 5.875.76$.

3º caso — *Numero fraccionario excedente ou não de 1.000* — No tocante a parte inteira do numero fraccionario, que se procura converter, devem ser observadas as regras estabelecidas nos dois casos precedentes, conforme se trate de um numero inteiro maior ou menor do que mil.

Par une légère enquête tels furent les résultats obtenus, concernant les différents modèles de mesures agraires fréquemment en usage dans le territoire brésilien.

Description des tables et manière de s'en servir

DESCRIPTION — La table concernant chaque type de mesure enregistre, en hectares, l'équivalent des nombres entiers de 1 à 1.000. A partir de cette limite inférieure, la correspondance des nombres décimaux est obtenue par rapport aux multiples de 1.000 qui passent à figurer dans la colonne des *Milliers* ("Milhares"), placée à gauche de chaque page pour la plus grande commodité des calculs à effectuer.

En dix sections distinctes se divise la partie de la table où figurent les conversions des nombres entiers ne dépassant pas 1 000; la première section enregistre les équivalences décimales des 100 premières unités (1-100); dans la seconde section figurent les réductions relatives aux nombres compris entre 101 et 200; et ainsi de suite, jusqu'à la dixième division où l'on arrive aux résultats maximums (901-1.000).

MANIÈRE DE SE SERVIR DES TABLES: — Dans la conversion décimale trois cas distincts peuvent se présenter:

1^{er} cas — *Nombre entier ne dépassant pas 1.000* — Le nombre entier ne dépassant pas 1.000 est intégralement compris en l'une des 10 divisions de la table où l'on trouve aussi le résultat de la conversion qui s'y rapporte. Si on veut, par exemple, savoir l'étendue d'une aire de 128 "alqueires" (géométriques) de 80 brasses de front par 80 brasses de fond, on trouvera la sus-dite étendue enregistréée dans la colonne 101-200 de la table IX (page 41) et à sa droite, à la même ligne horizontale, son équivalent — 396,49 hectares.

2^{me} cas — *Nombre entier dépassant 1.000* — Si le nombre dont on veut faire la réduction dépasse 1.000 unités, on cherche en l'une des 10 divisions l'équivalent décimal des trois derniers chiffres, l'équivalent relatif aux *milliers* se trouvant enregistré dans la division y respective ("Milhares"). Moyennant une simple addition des résultats partiels, on obtient le chiffre total qui exprime la conversion du nombre dont il s'agit. Ainsi, par exemple, pour réduire à hectares 2.428 "alqueires" de 24.200 mètres carrés, on cherche dans la table XIII, colonne 401-500 (pag. 63), le nombre correspondant à 428 "alqueires" et, à côté, dans la division des *milliers*, on trouve l'équivalent décimal relatif aux 2.000 "alqueires" restants. Le résultat total de la conversion en hectares sera, donc, exprimé de la manière suivante: $1.035.76 + 4.840.00 = 5.875.76$.

3^{me} cas — *Nombre fractionnaire dépassant ou non 1.000* — En ce qui se rapporte à la partie entière du nombre fractionnaire, dont on veut faire la conversion, les règles établies pour les deux cas qui précèdent devront être suivies d'accord avec le nombre entier, plus ou moins élevé que mille.

No que diz respeito, porém, á parte fraccionaria ($\frac{1}{4}$, $\frac{1}{2}$, $\frac{3}{4}$, $\frac{1}{3}$, $\frac{2}{3}$), serão as reduções obtidas de conformidade com as cifras constantes da tabella seguinte:

Equivalentes decimaes das principaes unidades agrarias e de suas fracções mais communs

| MEDIDAS AGRARIAS E SUAS DIMENSÕES | | Nu- meração das tabellas | EQUIVALENTES DECIMAES | | | | | | |
|-----------------------------------|-----------------------------|-----------------------------------|-----------------------|--------------------------|---------------|---------------|---------------|---------------|------|
| | | | Da unidade | Das seguintes fracções : | | | | | |
| | | | | $\frac{1}{4}$ | $\frac{1}{2}$ | $\frac{3}{4}$ | $\frac{1}{3}$ | $\frac{2}{3}$ | |

Supponhamos que se trate de reduzir a hectares a área total de 2.328 alqueires e mais a fracção de $\frac{3}{4}$, sendo o alqueire identico ao da tabella XIII, isto é, de 24.200 metros quadrados. A seguinte expressão numerica indicará as operações elementares que devem ser feitas para obter-se a conversão final: $793.76 + 4.840.00 + 1.81 = 5.635.57$ hectares.

A vigesima sexta e ultima tabella (tabella XXVI), relativa á conversão das extensões territoriaes segundo o numero de braças de frente e de fundo, diverge, entretanto, das demais tabellas quanto á sua construcção numerica. Ahi os resultados decimaes são encontrados no cruzamento das duas columnas de algarismos (vertical e horizontal), em cujos extremos figuram os numeros que exprimem as dimensões da superficie rectangular a que, para maior facilidade dos calculos, são assimiladas as áreas dos terrenos.

(1) Tambem conhecida com a denominação de *quadra quadrada*, no Rio Grande do Sul. Em alguns Estados, a *quadra* comprehende 100×100 braças, correspondendo, portanto, ao *alqueire* das mesmas dimensões.

(2) Tambem denominada *quadra de campo*.

(3) Ou *legua de sesmaria*.

Quant à la partie fractionnaire ($\frac{1}{4}$, $\frac{1}{2}$, $\frac{3}{4}$, $\frac{1}{3}$, $\frac{2}{3}$), les réductions seront obtenues d'après les chiffres de la table suivante.

Equivalentes décimales des principales mesures agraires et de leurs fractions les plus communes

Supposons que l'on veuille réduire à hectares la superficie totale de 2.328 "alqueires" et en plus la fraction de $\frac{3}{4}$, l'"alqueire" étant identique à celui de la table XIII (24.200 mètres carrés). L'expression numérique suivante indiquera les calculs élémentaires à effectuer pour obtenir la conversion finale: $793,76 + 4.840,00 + 1,81 = 5.635,57$ hect.

La 26^{ème} et dernière table (table XXVI), concernant la conversion des superficies territoriales d'après le nombre de brasses de front et de fond, diffère, cependant, des autres tables quant à sa construction numérique. On y trouve les résultats décimaux dans l'entrecroisement des deux colonnes de chiffres (verticale et horizontale), résultats qui expriment la superficie rectangulaire à laquelle, pour plus de facilité des calculs, on a assimilé les aires des terrains recensés.

(1) Mesure agraire aussi connue sous le nom de «quadra quadrada» (carré) à Rio Grande do Sul. Dans quelques États la «quadra» comprend 100 × 100 brasses, correspondant, par conséquent, à l'"alqueire" des mêmes dimensions.

(2) Aussi dénommée «quadra de campo» (carré de champ).

(3) Ou lieue de «sesmaria».

Eis, em resumo, as notas e indicações que puderam ser ligeiramente coordenadas, tendo em vista, principalmente, o objectivo acima apontado, isto é, facilitar o mais possível os serviços de apuração do censo agrícola, no tocante ás questões relativas á extensão dos immoveis recenseados. Os elementos de que se utilizou a Directoria Geral de Estatística foram, em geral, colligidos por intermedio dos delegados geraes do recenseamento, ou provieram, algumas vezes, de outras fontes de informações não menos auctorizadas ou merecedoras de fé. Devido, porém, á exiguidade do tempo disponivel para o preparo e impressão dos quadros numericos e á urgencia que havia em utilizal-os nos serviços de apuração, não foi possível aproveitar, como convinha, na parte anterior desse trabalho, algumas informações tardiamente colhidas, motivo esse que justifica de sobra a sua publicação em *annexo* (1)

Rio, 31 de Março de 1921.

ANTONIO CAVALCANTI A. DE GUSMÃO
Chefe de Secção

(1) Na publicação agora feita, foi inteiramente modificada a ordem numerica das tabellas constantes da primeira edição.

Voici en résumé les notes et renseignements qu'on a pu coordonner, ayant en vue principalement l'objectif sus-mentionné, c'est à dire, de faciliter le plus possible les travaux du dépouillement du recensement agricole en ce qui touche les questions relatives à l'étendue des immeubles recensés. Les éléments dont s'est utilisée la Direction Générale de Statistique ont été cuillis, en général, par l'intermédiaire des délégués généraux du recensement ou proviennent de sources également autorisées.

De par le peu de temps disponible pour l'élaboration et impression des tableaux numériques et à l'urgence qu'il y avait à les utiliser, il n'a pas été possible, comme il convenait, dans la partie antérieure à cet ouvrage, de profiter de quelques renseignements trop tard cueillis, motif qui justifie pleinement sa publication en "annexe" (1).

Rio, le 31 mars 1921.

ANTONIO CAVALCANTI A. DE GUSMÃO
Chef de Section

(1) Dans cette édition on a entièrement modifié l'ordre numérique des tables de la 1^{ère}.

(TABLE DES MATIÈRES)

| | PAGS. (Pags.) |
|--|------------------|
| INTRODUÇÃO (Introduction)..... | III—XIX |
| TABELLAS (Tables) : | |
| Tabella (Table) I — Tarefa de 25 × 25 braças..... | 1— 5 |
| » II — » » 30 × 25 » | 6— 10 |
| » III — » » 30 × 30 » | 11— 15 |
| » IV — Cincoenta — 50 × 50 » | 16— 20 |
| » V — Quadra de 60 × 60 » | 21— 25 |
| » VI — Alqueire » 50 × 75 » | 26— 30 |
| » VII — » » 75 × 75 » | 31— 35 |
| » VIII — » » 79 × 79 » | 36— 40 |
| » IX — » » 80 × 80 » | 41— 45 |
| » X — » » 85 × 85 » | 46— 50 |
| » XI — » » 89 × 89 » | 51— 55 |
| » XII — » » 91 × 91 » | 56— 60 |
| » XIII — » » 100 × 50 » | 61— 65 |
| » XIV — » » 100 × 75 » | 66— 70 |
| » XV — » » 100 × 80 » | 71— 75 |
| » XVI — » » 100 × 100 » | 76— 80 |
| » XVII — » » 112 × 112 » | 81— 85 |
| » XVIII — » » 150 × 100 » | 86— 90 |
| » XIX — » » 150 × 150 » | 91— 95 |
| » XX — » » 100 × 200 » | 96—100 |
| » XXI — » » 200 × 200 » | 101—105 |
| » XXII — Braça quadrada — (2 ^m ,20 × 2 ^m ,20)..... | 106—110 |
| » XXIII — Morgos — 50 × 50 metros..... | 111—115 |
| » XXIV — Braça de sesmaria — 1 × 3.000 braças..... | 116—120 |
| » XXV — Quadra » » — 60 × 3.000 » | 121—125 |
| » XXVI — Conversão em hectares das extensões territorias segundo o numero de braças de frente e de fundo | 126—136 |
